DAIRY MANAGEMENT SOFTWARE

GET YOUR OWN MOBILE APP FOR HOME DELIVERY OF DAIRY PRODUCTS WITH YOUR BRAND NAME

Product Introduction

We at AVS Prime Technologies LLP have developed a complete digital platform for dairy business owners. Our software helps to keep a track record for sales, recharge, vacation, inventory, production, supply, purchase management, orders with live tracking system using membership cards with printed QR code for each of their customers. The dairy owners have to issue pre-paid membership cards to promote cashless transactions and provide a better service to their customers. This card can be issue to the customers from the business owner offices after they submit information such as their name, address, mobile number etc. and deposit the advance amount. If any dairy owner wants to manage the post-paid facility for membership then the software has the facility to manage it. Using the membership card, customer's information and transaction records are kept in the software at a secured online database.

The dairy representative or delivery boys have to scan the QR code on a customer's membership card using the delivery boy app while to time of providing home delivery of milk or other dairy products. Once the delivery boy scans the QR code on the membership card, their mobile app shows information about that customer account with the product order details. The delivery boy app has a facility that they can make the transaction of dairy products by choosing a quantity and can make the recharge also on any customer account by scanning the QR code. Once the delivery boy completed with the product transaction then suddenly the transaction record gets updated in the transaction section inside the customer mobile app and the transaction amount for the product gets deducted from the customer wallet. The software has various features as per the needs for dairy business owners and it includes mobile app for customers (membership & e-commerce), delivery boys and CRM software for dairy owners.
